Introduction

BioBridge is an enrollment and synchronization middleware that overlays enrollment and demographic synchronization between MorphoManager and third party data sources. The infrastructure is extensible and supports interfacing to multiple third party systems (one at a time) by the implementation of an interface. BioBridge is not dependent on the underlying technology platform required for integration.

BioBridge supports the following versions of C-Cure 9000:

- 2.2
- 2.3
- 2.4

Support

Please contact your installer for additional support.

Setting up BioBridge

The following areas of MorphoManager will need to be configured as part of the Software House C-Cure 9000 BioBridge setup:

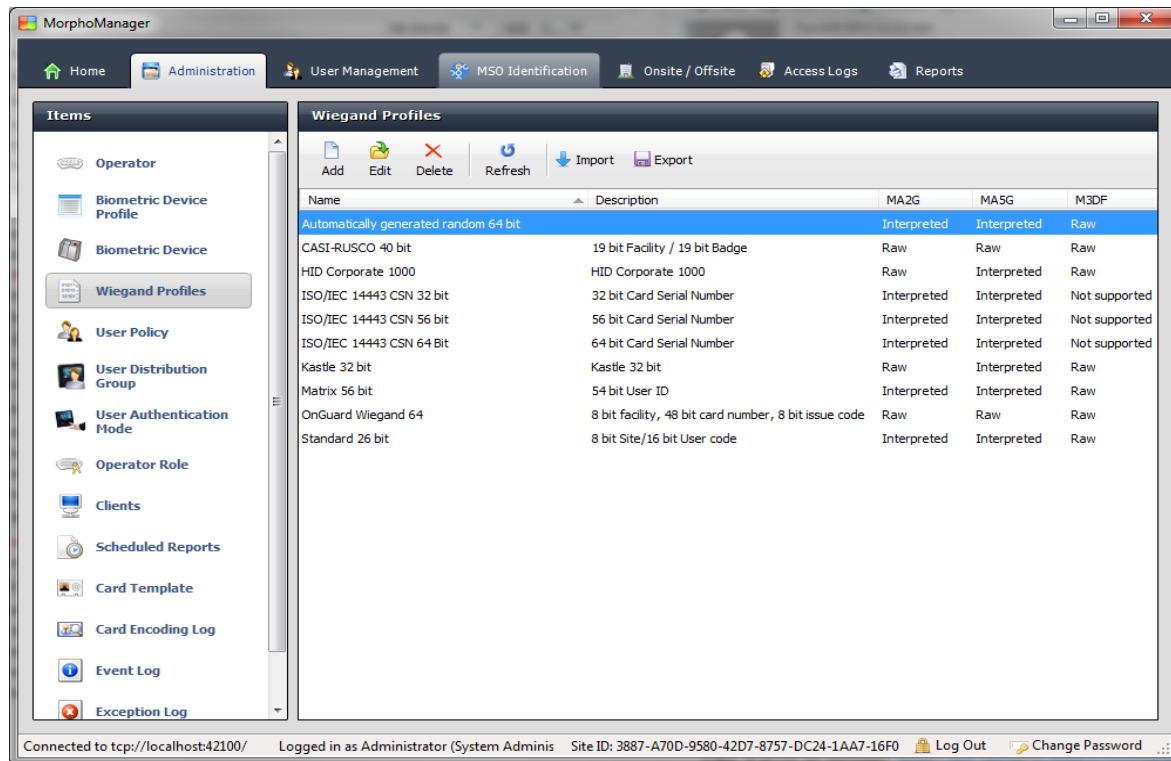

1. Wiegand Profiles
2. Biometric Device Profiles
3. Biometric Device
4. User Policy
5. User Distribution Group
6. BioBridge System Configuration

Wiegand Profiles

Wiegand Profiles define what information is output over the Wiegand Out interface of the Morpho Biometric Devices when a user is identified. This is most typically used in conjunction with an Access Control System.

- From Administration tab select Wiegand Profile.
- Click **Add** button to create a custom Wiegand profile.

The Wiegand formatting used can vary from system to system, but some common formats are listed below.

 The actual setting of the Wiegand Profile from this list will be done at the User Group and Biometric Device Profile Level. Please refer to those sections for further details.

Biometric Device Profile

The Biometric Device Profile will define common settings and parameters for one or more biometric devices. This profile can be applied when adding units into the system from the Biometric Device section of Administration.

- From Administration tab select Biometric Device Profile.
- Click **Add** button to create a new Biometric Device Profile.

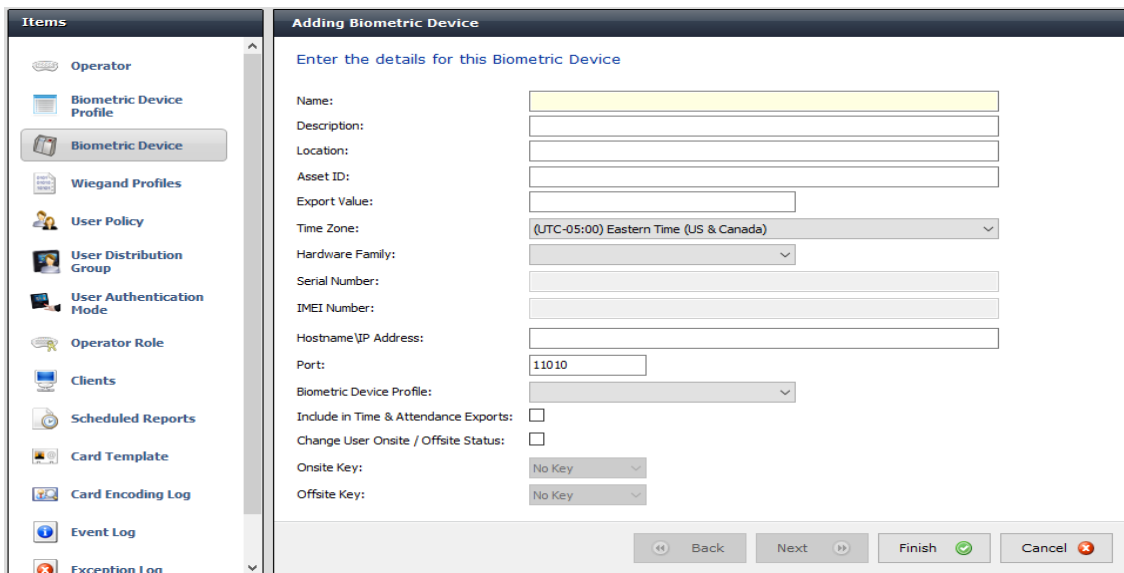

In order to create the most basic profile utilizing biometrics stored on the devices that can be used, simply give the profile a name and click **Finish**. Please reference the MorphoManager User Manual for more detail on all the various properties that can be assigned to a Biometric Device Profile including the use of smartcards.

 If you plan on using a Wiegand Profile, you will need to set the Wiegand Profile for the Biometric Device(s) here. The Wiegand Profile you choose for your devices must marry to the one being utilized for your users set in the User Group section of this guide.

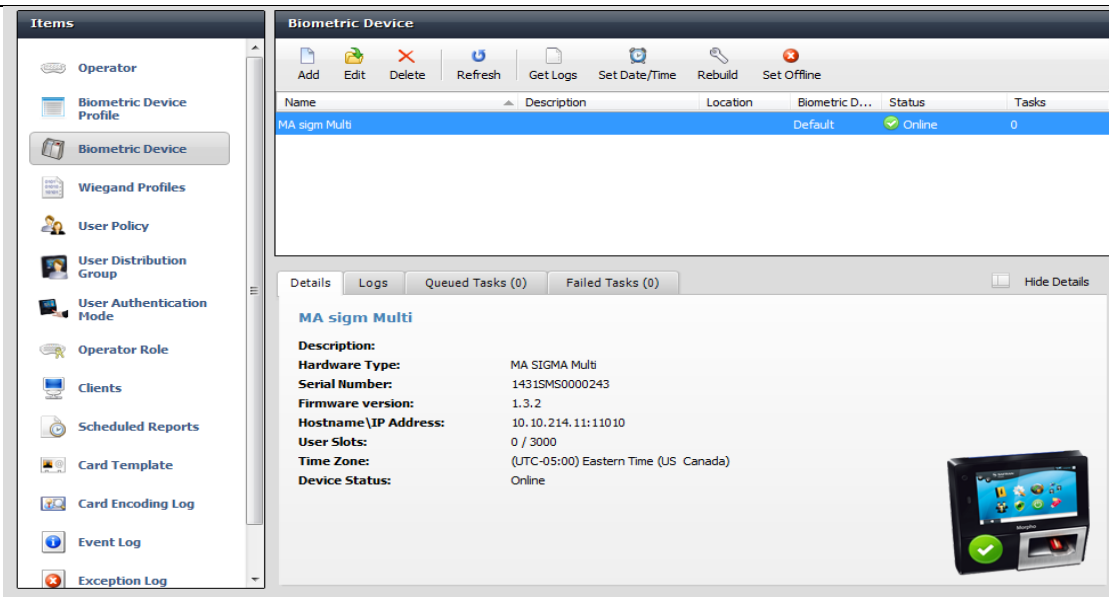

Biometric Device(s)

A Biometric Device is the device used to verify users and allow access to doors. They record a log of every attempt to gain access. MorphoManager is used to manage user’s access to Biometric Devices.

- From Administration tab select Biometric Device.
- Click **Add** button to create a new Biometric Device.
- Enter the details for the device including the Hardware Family the device falls into, the IP address, and the Biometric Device Profile.

- Once the required details are entered click **Finish**. Below is a screenshot of how the Biometric Device Screen looks after the configuration and the devices are online.

User Policy

User policies are used to apply access rights and rules to all members of the group. To Configure BioBridge, MorphoManager’s UserPolicy with an Access Mode “**Per User**” must be selected. This will create User Distribution Groups (groups of Biometric Devices) that can place the enrolled user into specific devices.

- From Administration tab select User Policy.
- Click **Add** button to create a new User Policy.

Adding User Policy

Enter the details for this User Policy

Name:

Description:

Access Mode: Allow MA 500 database selection during user enrollment

Time Mask Mode:

Extended User Details: Display extended user details

Wiegand Profile:

User Authentication Mode:

Wave Enrollment Minimum Hands:

Finger Biometric Enrollment Minimum Fingers:

Preferred Finger One:

Preferred Finger Two:

Preferred Duress Finger:

Show Photo Capture Page:

Show Wave Biometric Capture Page:

Show Finger Biometric Capture Page: (User Authentication Mode requires templates)

Navigation:

If you plan on using a Wiegand Profile, you will need to set it here in order for the users enrolled in this User Policy to have a particular Wiegand Profile. The Wiegand Profile you choose for your users must marry to the one you utilize for your biometric access devices set in the Biometric Device Profile section of this guide.

The default User Policy will be set to utilize an authentication mode of Biometric (1: Many). To utilize another authentication mode (such as encoding smartcards) additional User Policies can be created.

Please reference the MorphoManager User Manual for more detail on all the various properties that can be assigned to a User Policy including Wiegand Profile, Finger Biometric Enrollment Minimum, Fingers, Access Modes and User Authentication Modes.

User Distribution Groups

User Distribution Groups are designed to distribute users onto groups of MA readers or MorphoManager Clients. In order to be utilized the user must be in a User Policy that has its Access Mode set to "Per User". Then the User Distribution Groups will be selectable when creating (or editing) a user.

- From Administration tab select User Distribution Group.
- Click **Add** button to create a new User Distribution Group.

Below is the screenshot where group will only be placing users on one of the three devices installed on the system.

BioBridge System Configuration

The last step in the process is to configure BioBridge specifications to C-CURE 9000.

- From Administration, select System Configuration.
- Select the BioBridge Tab in System Configuration.

The screenshot shows the 'MorphoManager BioBridge Settings' interface. It includes several configuration fields:

- System:** A dropdown menu currently set to 'None' with a 'Configure connection' button to its right.
- Wiegand Profile:** A dropdown menu.
- Grouping Mode:** A dropdown menu.
- Caching Engine Refresh Interval (min):** A text input field containing the value '5'.
- Synchronization Engine Refresh Interval (ms):** A text input field containing the value '100'.
- Enable Forced User Policy:** An unchecked checkbox.
- Forced User Policy:** A dropdown menu set to 'Default'.
- User Distribution Group Mappings:** A table with two columns: 'Access Groups' and 'User Distribution Group'. The table is currently empty.

- **System:** From the System drop down menu choose C-CURE 9000 and click the **Configure connection** button. A BioBridge connection box window will pop up. Fill in all the required fields and click OK.

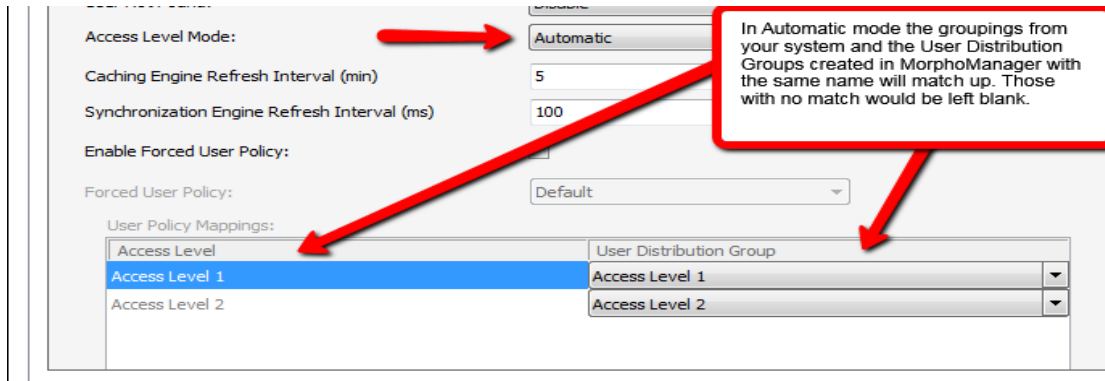

The screenshot shows a dialog box titled 'BioBridge Software House C-Cure 9000'. It contains the following sections:

- Server:** A text input field for the 'C-Cure 9000 Server' with a placeholder text: 'Please enter the hostname/address of the C-Cure 9000 SQL database (including instance):'.
- Logon details:** A section with the text 'Please select the authentication mechanism to use to connect to the C-CURE 9000 SQL Instance:'. It has two radio buttons:
 - Use Windows Integrated Security
 - Use SQL Server User & Password
- Username:** A text input field.
- Password:** A text input field.
- Partition:** A section with the text 'If your C-Cure 9000 application uses partitions and you wish to use a single particular one, you must use the Load Partitions button and select the partition you wish to use. Otherwise, MorphoManager will use All Partitions by default.' It includes a dropdown menu for 'Partition to Use' set to 'All Partitions' and a 'Load Partitions' button.

 At the bottom of the dialog are 'OK' and 'Cancel' buttons.

- **Wiegand Profile:** Select the Wiegand format in use from the drop down menu.

- **Access Level Mode:** This setting determines how MorphoManager should map C-CURE 9000 users into MorphoManager User Distribution Groups.
 1. **Automatic:** This mode will automatically match Access Level groups from C-CURE 9000 to the ones created in MorphoManager User Distribution Group if they have the same naming convention.

2. **Manual:** If the Access Level grouping names of C-CURE 9000 and the User Distribution Group(s) created in MorphoManager are not the same, then selecting which C-CURE 9000 Access Level maps to which MorphoManager User Distribution Group can be done manually in the User Policy Mappings.

- **Make sure to click SAVE when finished!!**

Using the BioBridge Enrollment Client

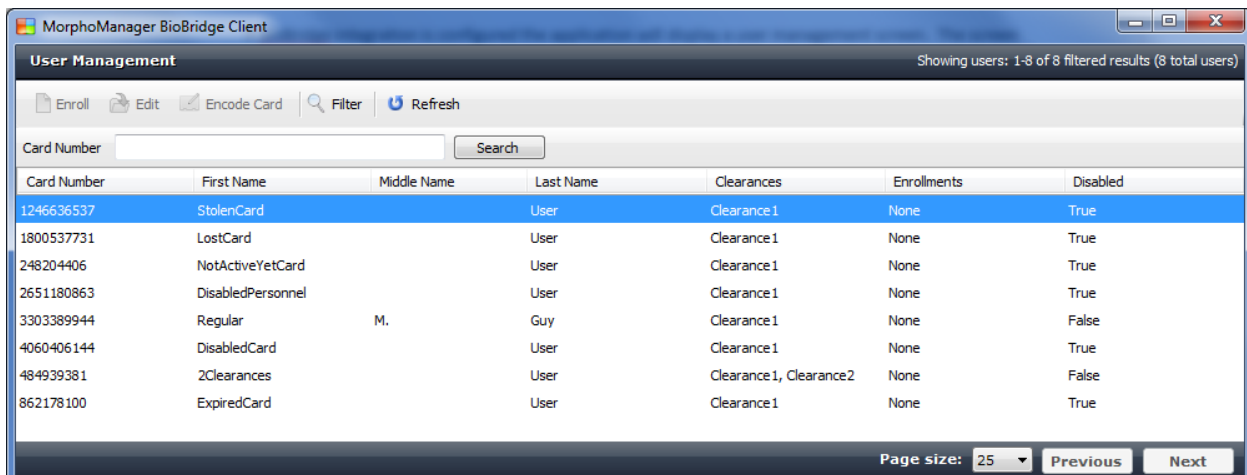

After configuring BioBridge you will now utilize the BioBridge Enrollment Client. This client will check if BioBridge Integration has been enabled and configured. If it is has not the application will display the message “BioBridge integration has not been enabled and configured” and you will need to go back to MorphoManager/Administration/System Configuration/BioBridge to configure it properly.

If BioBridge integration is configured the application will display a user management screen. The screen will consist of a toolbar and a data grid.

Toolbar

The toolbar will have the following items:

- Enroll
- Edit
- Encode Card
- Filter
- Refresh
- Search Field

Enroll

Enroll will start the enrollment of the selected user. The enrollment process will be derived from the standard MorphoManager user add/edit wizard with the following pages (For details on the enrollment process please see the User Management section of the MorphoManager User Manual):

- Authentication Type (Only if more than one mode is configured)
- 3D Face Selection
- 3D Face Enrollment
- Finger Selection
- Finger Enrollment

If a card based authentication method is configured the operator will be prompted if they want to encode a card.

Edit

Opens the already enrolled user details for viewing or editing.

Encode Card

Encode card will display an animation of the card being presented to a SDI 011 and wait for the card encoding to complete or be cancelled.

Filter

The screenshot displays a 'Filter' interface with the following components:

- User Details:**
 - First Name:
 - Middle Name:
 - Last Name:
 - Card Number:
 - Enabled: Any Enabled Disabled
- User Wiegand values:**
 - Card Number:
- Clearances:**
 - Select All Clear All
 - Clearance1
 - Clearance2
- Sort By:**
 - Primary:
 - Secondary:
 - Tertiary:

At the bottom right, there are three buttons: (with a red eraser icon), (with a green checkmark icon), and (with a red X icon).

Filter will show a popup inline form that allows filtering on the following items:

- First Name
- Middle Name
- Last Name
- Card Number
- Enabled/Disabled
- Clearances

Refresh

Refresh will update the data currently being shown using the currently set filter conditions.

Search Field

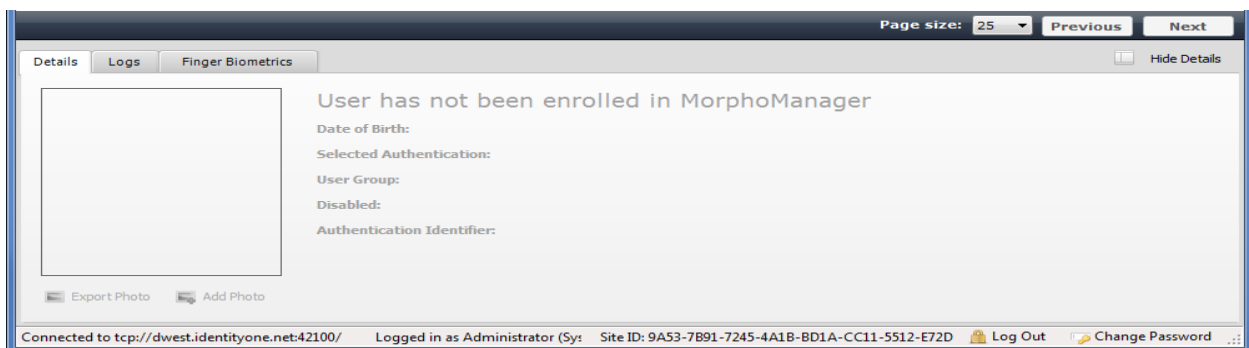

The Search Field can be used to find individual users quickly and/or to migrate users from C-CURE 9000 to the BioBridge Enrollment Client without waiting for a cache refresh.

Data Grid

The data shown in the data grid is a combination of your system and MorphoManager. Only users that exist in your system will be shown. A MorphoManager user does not exist until the user is enrolled. By default pagination is set for the first 25 BioBridge users to be shown. Operators may change the pagination to 25, 50, 100 & 250.

The data grid will have the following columns:

- Card Number
- First name
- Middle name
- Last name
- Clearances – All of the Access Level groups that your user is a member of in your system.(Comma separated values)
- Enrollments (None, Finger, Finger & 3D Face, 3D Face) (Derived from linked MorphoManager User)
- Disabled- A value of either True or False will be present.

Enrolled user will show their MorphoManager details in the “Show Details” panel below the data grid. This area will be blank if the user has not been enrolled.

Embedded enrollment setup

Embedded enrollment is not supported for Software House C-Cure 9000.
